2012 Bond Oversight Commission

March 1, 2016

Roger W. Randolph
City Clerk
City of Tucson

Dear Mr. Randolph,

In accordance with Resolution 21945 adopted by Mayor and Council on August 7, 2012, I provide the accompanying document as the Bond Oversight Commission's 2015 Annual Report to the Mayor and Council and Citizens of the City of Tucson.

The report describes the activities and recommendations of the 2012 Bond Oversight Commission during its third year of existence.

The BOC member attendance record is also included within the report. Please forward the BOC Annual Report to the appropriate City officials and post the report on the City Clerk's website for Boards and Commissions.

Sincerely,

A handwritten signature in blue ink that reads "Bruce Burke". The signature is fluid and cursive.

Bruce Burke
BOC Chair

In accordance with Resolution 21945 adopted by Mayor and Council on August 7, 2012, please consider this document the Bond Oversight Commission's annual report to the Mayor and Council and Citizens of the City of Tucson.

Introduction

The 2012 Bond Oversight Commission (“BOC”) was established by the City Manager and the Tucson Mayor and City Council. The Committee is charged with responsibility to monitor the progress of road improvement projects to ensure that bond funds are used only as approved by the voters.

In accordance with Resolution 21945 adopted by Mayor and Council on August 7, 2012, please consider this document the Bond Oversight Commission's Annual Report to the Mayor and Council and the Citizens of the City of Tucson.

Executive Summary

The promise to voters during the Proposition 409 campaign was that the City would expend \$100 million over five consecutive years to improve City roadways. Now in its third year, the City of Tucson Road Recovery Program is currently ahead of schedule and exceeding initial budget expectations.

In adopting Proposition 409, City residents approved a package of specified arterial roadways to be improved. As a result of TDOT's conservative road repair estimates and a favorable bidding environment resulting from lower material costs, the total arterial road mileage repairs authorized by Proposition 409 are now roughly estimated to cost only \$60 million. As a result, this year the BOC recommended, and the Mayor and Council unanimously adopted, an allocation of the “extra” \$40 million in bonded revenue to be spent on an expanded list of arterial and residential road repair projects. With this additional capacity, TDOT has added an additional 550 lane miles to the program, which results in roadway improvements in about 45 more roadway segments. Additionally, TDOT will be able to incorporate more maintenance projects to institute good paving preservation.

TDOT has made significant improvements to the Road Recovery website - <https://www.tucsonaz.gov/street-bonds> - by creating a user-friendly interactive map that allows the public to view roadway segments that have been completed, segments that are currently under reconstruction and planned roadway improvements. The map also identifies neighborhood grids that have been improved, grids that are currently being improved and planned improvements to local streets. The map also allows users to view current and future bicycle boulevards.

Despite the fact that TDOT has made great strides to improve the City’s roadway infrastructure through the bond program, the City’s unmet needs are still great and far exceed current bond and other budgeted revenues. In November, 2015, voters countywide rejected a Pima County Bond Program - Proposition 425 - to spend \$160 million to improve and preserve roadways in the entire region. As its share, the City would have received a much-needed \$65.5 million for roadway improvements. It is imperative that the City find additional ways to increase funding to improve the City’s roads and to supplement the current Road Recovery Program.

Bond Oversight Commission Membership And Attendance

The following is a list of the Commission members with their respective rolls and appointers.

2012 Bond Oversight Commission Members:		
Member	Role	Appointed By
Mr. Bruce Burke	Chairperson (2016)	City Manager
Mr. Dale Calvert	Co-Chair (2014)	City Manager
Mr. Daniel Castro	Co-Chair (2016)	Ward 1
Mr. Melvin Cohen	Member	Mayor
Mr. Ramon Gaanderse	Chairperson (2015)	City Manager
Mr. Ricky Hernandez	Member	City Manager
Mr. Ian Johnson	Member	Ward 3
Dr. Lorraine Morales	Member	Ward 4
Mr. Jesse Lugo	Co-Chair (2015)	Ward 5
Mr. Steve Pageau	Chairperson (2014)	Ward 6
Mr. Steve Alan Taylor	Member	Ward 2

The BOC met six times in FY 2015-2016. The omission oversaw the expenditure of funds on arterial street repairs and used a data driven selection process to determine which residential streets would be improved in the upcoming fiscal years.

2012 Bond Oversight Commission Attendance Summary 2015-2016

Name	Appointed by:	02/23/2015	03/10/2015	07/13/2015	9/17/2015	11/16/2015	2/04/2016

Steve Taylor	Ward 2	X	X	X	X	X	

Meeting Highlights – FY 2015-16

The Bond Oversight Commission met six times in FY 2015 – 2016. The Commission oversaw the expenditure of funds on arterial streets and used their selection process to determine which residential streets would be improved in the upcoming fiscal years.

February 23, 2015

Conservative estimates, a favorable bidding environment and lower petroleum prices created an excess capacity of about \$40 million to allow an expansion of the program to restore, repair and resurface additional City streets.

Given the extra capacity, TDOT presented the BOC with three different funding scenarios that showed how the \$40M would be allocated. Please note that from the existing pavement preservation program, the BOC has approved \$9M of the \$15M allocated to residential streets. As represented in the table below, the ‘Total Residential Allocation’ incorporates funding from the existing program and any additional funding from the surplus. Each scenario was represented graphically and had three components to consider; arterial allocation, residential allocation applying a worst-first methodology citywide, residential allocation applying a worst-first methodology with attempt to balance funding per ward. TDOT recommended that the BOC select Scenario 2.

Scenario	Arterial Allocation	Residential Allocation	Total Residential Allocation
1	\$40M	0	\$15M
2	\$37M	\$3M	\$18M
3	\$34M	\$6M	\$21M

The BOC approved the staff recommended \$37M scenario. From the additional budget capacity, approximately \$37M will be allocated to the arterial roadway system and approximately \$3M will be allocated to the residential program. Of the \$37M allocated for arterials, approximately \$4.5M will be allocated to maintaining and preserving our roads as a practice of good pavement preservation. The arterial and residential scenarios presented to the BOC depicted the additional roadways that would be improved measured by centerline miles and the roadway selection process.

The BOC passed a motion to accept the staff recommended funding allocation of \$37M towards arterials and \$3M to residential streets. Total residential dollars would be \$9M: \$6M from existing program and \$3M additional from extra budget capacity.

The BOC passed a motion to accept Scenario A, but to redistribute some of the polygons in Ward 6 to Ward 1 (worst-first city wide/ TDOT staff recommended).

March 10, 2015

TDOT provided the BOC with the selection process to the roadways incorporated in the different scenarios presented.

Arterial Roadway Selection Process

For the arterial roadway system, the BOC was provided with a map and a list of roadways that were recommended to be improved. The roadways selected were reviewed for the overall condition index and prioritized through a scoring methodology. The 'score' incorporated the functional classification, overall condition index, engineer's recommendation, Downtown Core, Airport Area, bus route, and bike boulevard or route. Additionally, the BOC was provided with two lists of alternate roadways that could be improved if there continues to be additional budget capacity.

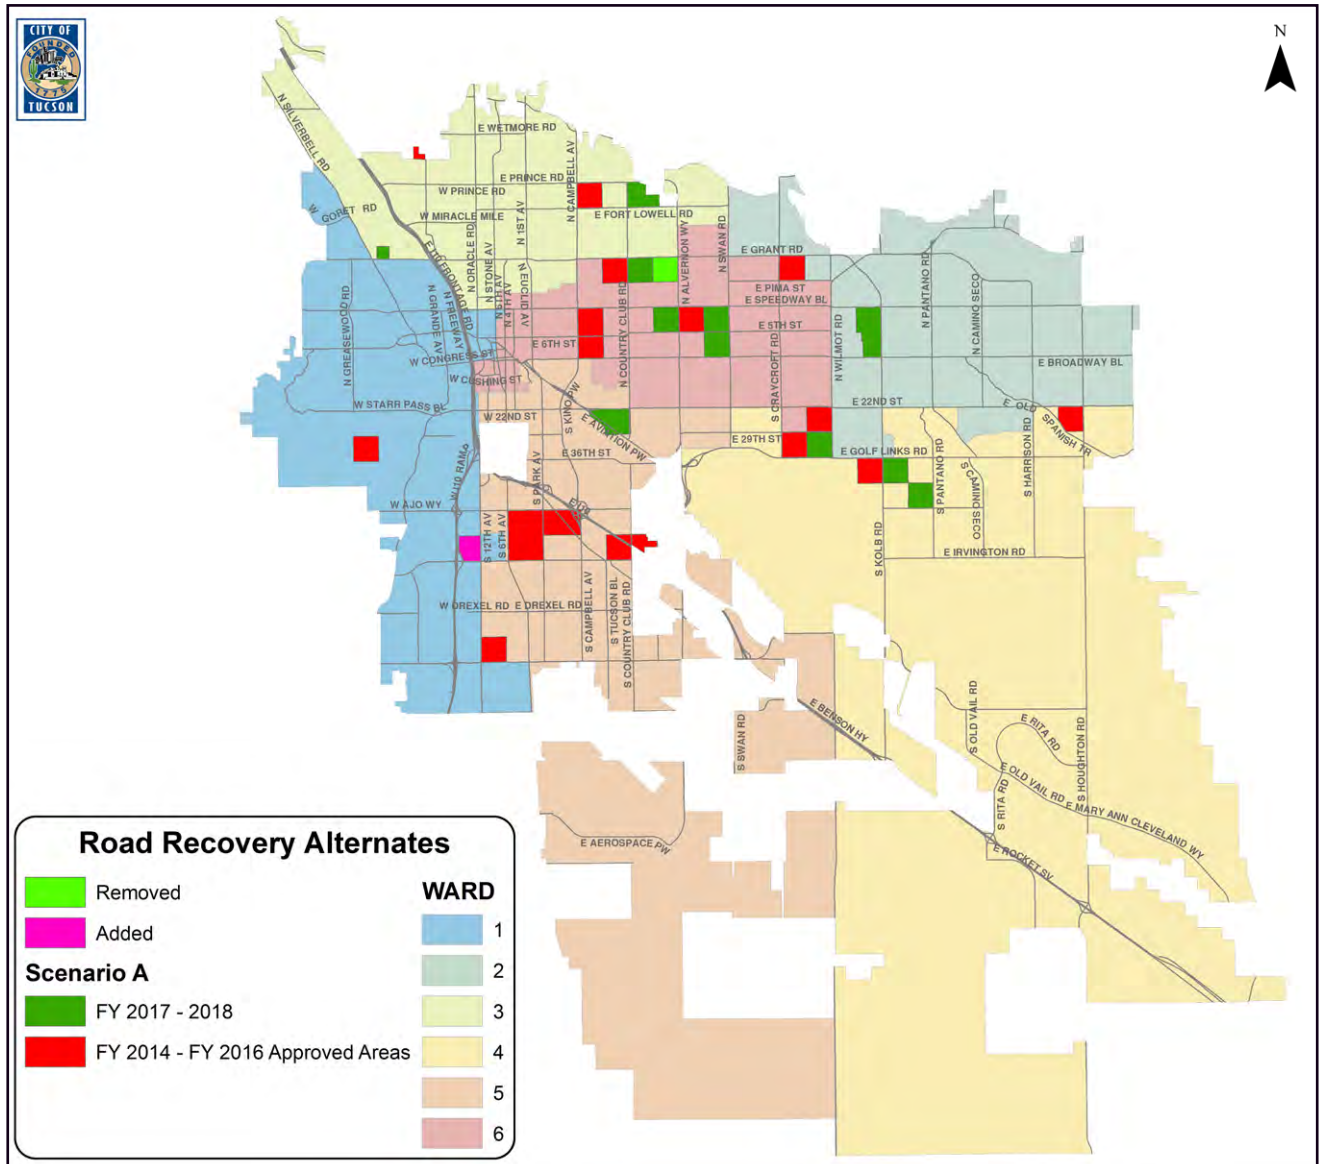

The BOC approved the arterial and alternate roadways recommended by TDOT (\$37M scenario) with the incorporation of moving Camp Lowell to the alternate list that will take precedence in the event of additional budget capacity.

Attachment A depicts the roadway alternates that were approved by the BOC. Also included are maintenance projects.

Residential Roadway Selection Process

At the February 23, 2015 BOC meeting, TDOT provided a ‘Worst Streets First’ recommendation for residential roadways. Two scenarios were provided – ‘worst streets first’ citywide regardless of Ward as represented in Scenario A and ‘worst streets first’ with an attempt to balance centerline miles per ward as represented by Scenario B. The BOC adopted Scenario A with the redistribution of a polygon (a delineation of neighborhood streets) in Ward 6 to Ward 1. (Initially, the BOC approved a residential scenario that incorporated local street improvements in Ward 1. It was later learned that these roadways could not be improved due to private ownership of the streets. Councilmember Regina Romero provided a Memo to the BOC regarding ward equity.)

TDOT identified potential polygons that could be reallocated from Ward 6 to Ward 1 for equality through the review of the available Ward 6 polygons overall condition indexes. Polygons in Ward 6 that included bicycled boulevards were not considered. The new reallocated Ward 1 polygon aligns with the available funds that are now eliminated from Ward 6. Additionally, the new Ward 1 polygon selected has more density in square yards than what was originally approved by the BOC in a past meeting.

The BOC approved the staff's recommendation of Scenario A with the incorporation of the swapped polygon from Ward 6 to Ward 1.

Please see **Attachment B** for the residential roads incorporated in Scenario A.

July 13, 2015

BOC members received an update on results of the Road Recovery Expansion Public Hearing held on April 21st at the Mayor and Council meeting. Daryl Cole, TDOT Director, thanked the commission for all its efforts. The council was receptive and voted unanimously for the recommendation. The BOC listened to citizen presentations during call to the audience. Areas included San Clemente neighborhood, Sam Hughes, Santa Cruz Lane, Starr Pass, Frontage Road and Silverlake, Enchanted Hills, Barrio Kroeger Lane and Rose Neighborhood. Daryl Cole also showed a map of the proposed package for Pima County Prop 425. The bond includes \$160 million for resurfacing for the whole county. The BOC reviewed the proposed Pima County Proposition 425 roadway recovery streets and accepted the report.

September 17, 2015

The BOC received a presentation from Jim DeGrood, PAG Deputy Director, on “RTA Project Updates and Post Recession Transportation Trends” Highlights of the presentation included: The Regional Transportation Authority (RTA) has 55 projects currently under construction, and 63 projects in the design or planning stages. There are five elements to the RTA Plan: Roadway, Safety, Environment & Economic Development, and Transit. Projects to be implemented in the near future include Sunset Road, Silverbell to I-10; Ina Road Interchange; and the Ruthrauff Road Interchange. 160 intersection projects have been completed of the 200 promised by RTA. 47 of 80 promised HAWK crossings and 108 of 200 promised bus pullouts have also been completed. MainStreet project gives long term support, including professional business counseling, to businesses affected by road construction projects. RTA has assisted with evening and weekend transit service expansion, route and service area expansion, extra peak service, express buses, circulator buses in outlying areas that feed to the main bus system, and augmented para-transit (Dial-a-Ride service). Additional project information can be found at the Pima Association of Government (PAG) website:

<http://www.pagregion.com/Default.aspx?tabid=36>

The BOC appointed Bruce Burke BOC Chair and Daniel Castro, Co-Chair for the 2015/2016 term.

Matt Hausman of TDOT presented a summary of the procurement status of several projects, showing the number of days to Contract Execution for Reconstruct Package 1, Rehabilitation Packages 1 and 4, Residential Package 1, Fogseal Package, and Professional Services. TDOT also used the existing on-call contract for outside survey, inspection, geotechnical investigation, striping design.

Robin Raine, Deputy Director of TDOT, presented a PowerPoint with a proposal for the restructuring of the **Citizen's Transportation Advisory Committee (CTAC)**. The CTAC was established in 1980 with 15 members to serve as an advisory and advocacy body to the Mayor and Council for transportation matters and programs. Due to various changes in the membership and a lack of quorum, it became impossible to add new members and continue to have meetings. A restructured CTAC would provide an opportunity for combining, reorganizing or sun-setting various advisory bodies. Members of short-term groups such as the BOC could join CTAC to share knowledge.

Alfred Zuniga, TDOT, distributed and discussed a list of the FY2015 and the projected FY2016 projects for the Proposition 409 Road Recovery Program. The first of the **Bond Program** projects is a fogseal package that will begin at the end of September. This project will take approximately one month and should be done by the end of October. There are approximately 27 roadways in the package and it is a quick process.

Priscilla Lane, TDOT, presented a **financial report** showing the costs of recent bond packages. The Series 2013 (FY2014) projects are complete and the fund is closed. The Engineer's Estimate was \$20.4 million and the projects were completed

at a cost of approximately \$20.2 million. Incidental costs include survey, design, geotechnical, inspection, and striping. The Series 2014 (FY2015) package had an Engineer's Estimate of \$24.4 million, and Actual Bids were \$20.5 million. The Total Costs to Date are slightly less than \$18 million.

Michael Graham of **TDOT Public Outreach** presented a report on Citizen Requests. He distributed a log of requests received by citizens to have their neighborhood streets (as well as collector or arterial streets) repaired. He noted that Michael Ortega, the new City Manager of Tucson, meets regularly with Daryl Cole. Mr. Ortega has requested that TDOT's accomplishments be more widely publicized.

November 16, 2015

Robin Raine, TDOT Deputy Director, provided an update on the restructuring of CTAC, focusing on membership structure and committee functions. Ms. Raine also went over the CTAC 2012 Work Plan. The BOC provided feedback on this proposal. Daryl Cole, TDOT Director discussed the failed Pima County Bond 425. The BOC discussed theories as to why the transportation bond did not pass and upcoming next steps. BOC was presented with an update on the Bond program status including the FY2015 active projects and FY2016 projects. The BOC requested that the handout show the Ward in which the improvements are made. Discussion was held on Third Street. The BOC communicated the importance of staying true to the commitment of improvements to bicycle boulevards. The BOC made a motion to revisit this topic at the next meeting.

February 4, 2016

BOC members were presented with Bond Financial Report and Program status and discussion followed. A demonstration of the TDOT interactive map was provided to illustrate roadways that will be preserved in the Ajo Way/Park Avenue area. Also a link to completed and planned bicycle boulevards was identified. BOC further discussed the need to support extended communication with citizens through the BOC 2016 Annual Report, editorials, Public Service Announcements, newsletters to neighborhood associations and social media links on the TDOT website. <https://maps2.tucsonaz.gov/prop409/>

These roadways have been improved using the various pavement treatments that are displayed in the chart below. Each treatment option adds a varying number of years of ‘service life’ to each street. The available treatment options are chip seal, fog seal, surface seal, seal coat, mill and overlay and reconstruction. **Attachment C** will specify which roadways have been completed, treatment used, and City Ward served.

Treatment Type	Service Life	Description
Cape Seal	10 Years	A cost effective dense pavement treatment used to help seal and bond the cracks in the existing pavement and improve chip retention and smoothness of the driving surface. It is used when the pavement condition has moderate distress and cracks and limited or no rutting. A Cape Seal is ideal for low traffic volume roadways and is the culmination of a chip, surface, and seal coats.
Chip Seal (Surface Seal)	7 Years	A surface treatment in which the pavement is sprayed with asphalt (generally emulsified) and then immediately covered with aggregate and rolled. Chip seals are used primarily to seal the surface of a pavement with non load-associated cracks and to improve surface friction on low volume streets.
Fog Seal (Surface Seal)	3 Years	A light application of slow setting asphalt emulsion diluted with water and without the addition of any aggregate applied to the surface of a bituminous pavement. Fog seals are used to renew aged asphalt surfaces, seal small cracks and surface voids, or adjust the quality of binder in newly applied chip seals.
Mill and Overlay (Structural Overlay)	15 Years	This process removes a defined thickness of the surface of the existing asphalt pavement, and after observed defects are corrected, the same thickness is replaced with new asphalt thereby returning the pavement to a nearly new condition. This is the second most costly pavement treatment option.
Reconstruction	20 Years	Complete design and pavement replacement of an existing failed street.
Seal Coat	3 Years	This treatment is mainly a preventive maintenance procedure applied to the asphalt pavement surface to prevent or delay costly corrective measures. Asphalt seal coats are surface treatments designed to seal and protect the asphalt pavement from harmful environmental conditions such as sunlight, rain, and snow. Surface treatments are also applied to enhance the wearing properties and improve the traction between the pavement and vehicle tires.
Surface Seal	7 Years	This treatment provides a “skim coat” of a restorative product to the existing pavement surface, filling minor cracks and correcting pavement defects such as rutting and raveling when applied.

BOC: Financial Review and Status
